SIDDHANT JAIN

+12062286509 | sid.jain.231@gmail.com | LinkedIn | Github

SKILLS:

Languages: Python, Java, SQL, Bash, JavaScript, C#, Go
Cloud and DevOps: AWS (Lambda, EKS, API Gateway, S3, DynamoDB, CloudWatch), Terraform, Docker, Kubernetes, GitHub Actions, Jenkins, AWS CodePipeline, Ansible
Observability: Prometheus, Grafana, Splunk, New Relic, SLOs and incident management, ELK
Data and ML in production: PyTorch, TensorFlow, MLflow, DVC, LangChain, LangGraph, feature engineering, A/B and drift monitoring, AgentSpace, OpenCV
Databases and Messaging: Postgres, Oracle, Redis, Kafka
Security and Compliance: IAM, KMS, VPC, WAF, CIS benchmarks

WORK EXPERIENCE:

Software Development Engineer, Community Dreams Foundation — **Feb 2025 – present**

- Designed and executed **SQL Server** performance validation workflows on **Windows** using **C#** and **PowerShell** to benchmark new builds and hardware; identified **query regressions** and **I/O bottlenecks**, improving query latency stability by **30%** across release cycles; collaborated with developers to reproduce, diagnose, and resolve performance issues.
- Built automated **regression detection** and **diagnostics pipelines** for long-running **SQL** performance tests, collecting execution plans, **CPU**, **memory**, and **disk metrics**; reduced manual triage effort by **40%** and improved release confidence by ensuring consistent performance baselines across versions and environments.

Software Developer – Machine Learning, The Legal Book — **Dec 2022 – Jun 2023**

- Implemented AI-driven "Review in Seconds": Enabled legal teams to explore **100+ contracts monthly** by comparing clauses against playbook parameters and flagging discrepancies. Developed backend using **Python** and **Flask** for real-time contract analysis and AI integration on **Linux** Operating System along with the assistance of **Terraform**.
- Streamlined **ML** Deployments & **CI/CD:** Automated rollout of **GPT/BERT** models with **Docker** and **Kubernetes**; established **Jenkins** pipelines, increasing deployment frequency by **30%**, and utilized **MLflow**, **DVC**, and **AWS** for reproducible workflows.
- Monitoring & Uptime: Assembled **Prometheus** and **Grafana,** reducing downtime by **20%** and elevating incident resolution.

Software Developer (Intern), Vriddhi Software Solutions, Pvt. Ltd. — **Mar 2022 – Aug 2022**

- ERP Implementation for **200+** Institutes: Deployed ERP software to handle academic/financial data, creating **PL/SQL** packages and procedures using **Oracle SQL Developer** for resilient data integrity.
- Inspected consistency checks and index defragmentation, boosting database performance by a predicted **15%**.
- ASP.NET & Data Availability: Revamped intranet and cloud layers on **ASP.NET 4.5,** raising data availability by **30%** through real-time synchronization**,** multi-threading**,** and optimized **C#** data access**.**

Artificial Intelligence Engineer (Extern), IBM. — **Apr 2021 – Jul 2021**

- Sales Forecast Web App: Crafted a forecasting platform with **NumPy, Pandas, scikit-learn, TensorFlow**, analyzing **1000+** of data points to predict store sales. Minimized debugging by **20%** via efficient **Flask**, **RESTful endpoints** and **Jinja2 templating.**
- LSTM-Based AI Model: Leveraged **RNNs** to study historical data, upgrading forecast accuracy by around **20%**.

PROJECTS:

End-to-End Medical Chatbot GitHub — **Jul 2024**

- Developed an end-to-end medical chatbot by leveraging **LLMs** and **RAG** models using **Langchain** and **OpenAI's API** on **AWS EC2**, resulting in handling **1,000+** queries per month with **98%** accuracy.
- Engineered an appointment booking system integrated with **AWS RDS** by streamlining **SQL**-based operations, achieving a **40%** reduction in processing time.
- Created an intuitive, compassionate medical **Q&A interface** by incorporating real-time analytics and optimized response prompts, leading to a **30%** decrease in patient anxiety during pilot tests. Optimized overall system performance by integrating efficient session management and real-time data analytics, resulting in a 25% reduction in response times.

E-Commerce Platform with Advanced Monitoring and Incident Management GitHub — **Jun 2024**

- Ideated a robust e-commerce website using **Java 17** and **Spring Boot**, incorporating real-time auditing and observability through **Splunk** and APM tools like **New Relic**, to detect and analyze system performance and user interactions.
- Architected Incident and Problem Management workflows using automated alerts and triggers via **ServiceNow**, cutting incident resolution time by **40%.**
- Optimized performance and reliability by addressing bottlenecks identified through **APM** tools, such as slow database queries and intensive backend processes; boosting page load speeds by **30%.**
- Strengthened security and data protection by Engineering secure user authentication with **Spring Security** and **OAuth 2.0**, along with data encryption, ensuring compliance with industry standards and safeguarding user information.

EDUCATION:

Masters in Science, Computer and Information Sciences, SUNY Buffalo, USA **CGPA: 3.8**

Bachelor of Technology, Computer Science with Business Systems, VIT University, India **CGPA: 3.91**

PUBLICATIONS:

Rust disease classification using deep learning algorithms **Link**: Presented at Eurasia Conferences in Berlin. — **May 2023**

Medify Chatbot **Link**: Published in Journal: IJARCCE. — **Sep 2022**

VOLUNTEER EXPERIENCE:

Member of Rotaract Club, VIT Vellore, India: Organized 50 awareness-raising seminars, fostering community engagement, while volunteering in social work for nearby villages — **Sep 2019 – Oct 2022**
