SIDDHANT JAIN

+12062286509 | sid.jain.231@gmail.com | LinkedIn

EDUCATION:

Masters in Science, Computer and Information Sciences, University at Buffalo, CGPA: 3.8 Aug' 23 – Dec' 24

Bachelor of Technology, Computer Science with Business Systems, Vellore Institute of Technology, India CGPA: 3.91 Aug' 19 – June 23

Relevant Coursework: Data Structures and Algorithms, Computer Networks, Cloud Computing, Database Management Systems, Microprocessor Architecture, Big Data, Microprocessor Architecture, Wireless Sensor Networks, Artificial Intelligence, Machine learning, Deep Learning, Operating Systems, Computer Security

SKILLS:

Languages: Java,C++, Python, C#, SQL, JavaScript, TypeScript, GraphQL, CSS, HTML5,XML, .NET, ReactJS, javascript, PHP, REST, NodeJS

Tools: Eclipse, IntelliJ, Android Studio, Anaconda, VS Code, MS Excel, Google Colab, AWS CLI, Oracle DB, Visual Studio, JDK IDE

Frameworks: Django, Scikit, NLTK, OpenCV, TensorFlow, Keras, Flask RESTful API, PyTorch, LangChain, LlamaIndex

Version Control/ CI-CD: GitHub, Jenkins, GitHub Actions, AWS CodePipeline

Methodologies: Kanban, Software Development LifeCycle, Scrum, Test Automation, Unit Testing.

Platforms: Windows, Linux, Web, MQTT, IBM Watson, AWS, Shell, Redshift, Ubuntu, Postman

WORK EXPERIENCE:

Software Developer - ML , The Legal Book Jan'23 – June' 23

- Implemented an AI-driven "Review in Seconds" feature for contract review, enabling legal teams to quickly analyze contracts by comparing clauses against playbook parameters and highlighting discrepancies.
- Automated the deployment of ML models (like **GPT**, **BERT**), using **docker** and **kubernetes**.
- Established **CI/CD pipelines** with **Jenkins**, increasing deployment frequency by 30%.
- Set up monitoring systems with **Prometheus** and **Grafana**, reducing downtime by 20%.
- Utilized **MLflow**, **DVC**, and **AWS** for scalable and reproducible ML workflows.
- Developed backend systems using **Python** and **Flask** to support real-time contract analysis and integrated with the AI-driven features.

Software Developer (Intern),Vriddhi Software Solutions, Pvt. Ltd. Apr'22 – May' 22

- Executed ERP software for handling academic and financial information for 200+educationalinstitutes.
- Designed **PL/SQL** packages, formulated functions and procedures to handle university data using **Oracle SQL** Developer
- Monitored all maintenance activities of SQL Server including database consistency check, and index defragmentation
- Improved proficiency in ASP .NET 4.5 Framework while developing the two layers: intranet and cloud base for the software
- Improved data availability by 30% through real-time data sharing and database synchronization using multi-threading and optimized data access techniques in **C#.**

Artificial Intelligence Engineer (Extern), IBM. June 21 – July 21

- Created a web application that predicts sales forecast of a store, analyzing data using **numpy**, **pandas**, **scikit-learn** and **tensorflow**.
- Built an AI model based on **long short-term** memory (NLP model) to study and analyze previous data using **Recurrent Neural Networks.**
- Reduced debugging time by 20% through efficient use of **Flask, RESTful** request dispatching, and **Jinja2** templating.

PROJECTS:

End-to-End Medical Chatbot July'24

- Developed a medical chatbot using **LLMs**, **OpenAI**, **LangChain**, **vectorDB**, and **LlamaIndex**, and deployed on **AWS EC2**.
- Implemented features for booking appointments, answering medical queries, and providing preliminary diagnoses.
- Integrated real-time data analytics to track user interactions and improve chatbot accuracy and response times, enhancing overall user experience.

E-Commerce Platform with Advanced Monitoring and Incident Management June' 24

- Developed a robust e-commerce website using **Java** and **Spring Boot**, incorporating real-time monitoring and observability through **Splunk** and Application Performance Monitoring (APM) tools like **New Relic**, to detect and analyze system performance and user interactions.
- Integrated Incident and Problem Management workflows using automated alerts and incident triggers in **ServiceNow**, ensuring quick response and resolution of issues.
- Optimized performance and reliability by addressing bottlenecks identified through **APM** tools, such as slow database queries and intensive backend processes, leading to faster load times and enhanced user satisfaction.
- Enhanced security and data protection by implementing secure user authentication with **Spring Security** and **OAuth 2.0**, along with data encryption, ensuring compliance with industry standards and safeguarding user information.

Social Media Misinformation Dataset Collection and Management (SMDM) Mar' 24

- Designed a scalable database using **PostgreSQL** on **AWSRDS** to track misinformation spread.
- Implemented data integrity, real-time updates, and security measures using **AWS IAM** and **CloudWatch**

PUBLICATIONS:

Rust disease classification using deep learning algorithms: Presented at Eurasia Conferences in Berlin. (May' 23)

Medify Chatbot: Based on the project that answers user queries and diagnose diseases and enables to book appointment with the specialist in the user's area. (Journal: IJARCCE) (Sept' 22)

VOLUNTEER EXPERIENCE:

Member of Rotaract Club, VIT Vellore, India: Organized many Seminars on awareness programs and also volunteered in many social-work in the near villages. (Sept'19 - Oct'21)
