SIDDHANT JAIN

+12062286509 | sjain35@buffalo.edu | LinkedIn

EDUCATION:

Masters in Science, Computer and Information Sciences, University at Buffalo, CGPA: 3.8 Aug' 23 – Dec' 24

Bachelor of Technology, Computer Science with Business Systems, Vellore Institute of Technology, India CGPA: 3.91 Aug' 19 – June 23

Relevant Coursework: Data Structures and Algorithms, Computer Networks, Cloud Computing, Database Management Systems, Microprocessor Architecture, Big Data, Microprocessor Architecture, Wireless Sensor Networks, Artificial Intelligence, Machine learning, Deep Learning, Operating Systems, Computer Security

WORK EXPERIENCE:

Software Developer - ML , The Legal Book Jan' 23 – June' 23

- Implemented an AI-driven "Review in Seconds" feature for contract review, enabling legal teams to quickly analyze contracts by comparing clauses against playbook parameters and highlighting discrepancies.
- Automated the deployment of ML models (like **GPT**, **BERT**), using **docker** and **kubernetes**. Established **CI/CD pipelines** with **Jenkins**, increasing deployment frequency by 30%.
- Set up monitoring systems with **Prometheus** and **Grafana**, reducing downtime by 20%. Utilized **MLflow**, **DVC**, and **AWS** for scalable and reproducible ML workflows and developed backend systems using **Python** and **Flask** to support real-time contract analysis and integrated with the AI-driven features.

Software Developer (Intern), Vriddhi Software Solutions, Pvt. Ltd. Apr' 22 – May' 22

- Executed ERP software for handling academic and financial information for 200+educationalinstitutes.
- Designed **PL/SQL** packages, formulated functions and procedures to handle university data using **Oracle SQL** Developer
- Monitored all maintenance activities of SQL Server including database consistency check, and index defragmentation and improved proficiency in ASP .NET 4.5 Framework while developing the two layers: intranet and cloud base for the software
- Improved data availability by 30% through real-time data sharing and database synchronization using multithreading in **C#.**

Artificial Intelligence Engineer (Extern), IBM. June 21 – July 21

- Created a web application that predicts sales forecast of a store, analyzing data using **numpy**, **pandas**, **scikit-learn** and **tensorflow**.
- Built an AI model based on **long short-term** memory (NLP model) to study and analyze previous data using **Recurrent Neural Networks.**
- Reduced debugging time by 20% through efficient use of **Flask, RESTful** request dispatching, and **Jinja2** templating.

PROJECTS:

Comprehensive QA Testing for MDM Platform July'24

- Led **QA** testing efforts for an **MDM** solution, focusing on both front-end and back-end components. Conducted thorough testing of **HTML**, **CSS**, and **JavaScript**-based interfaces to ensure a smooth user experience and compliance with accessibility standards.
- Executed back-end testing involving server-side programming, databases like **MySQL** and **PostgreSQL**, and **APIs**. Validated data flow, database integrity, and server responses to ensure consistent performance and reliability.
- Applied manual testing methodologies, utilizing various toolkits to identify, reproduce, and document bugs, enhancing the overall quality of the **MDM** platform. Focused on key areas like user authentication, device enrollment, and data synchronization.
- Implemented accessibility testing practices to ensure compliance with relevant guidelines, improving the platform's usability.

Automated Testing and Bug Analysis for Web and Mobile Applications June' 24

- Developed automated test scripts using **Python**, targeting critical front-end and back-end functionalities of web and mobile applications. Leveraged testing frameworks to automate repetitive tasks, increasing testing efficiency and coverage.
- Performed extensive manual testing on front-end elements, focusing on **UI/UX** aspects, responsiveness, and compatibility across different devices and browsers. Utilized accessibility testing tools to identify potential barriers for users with disabilities.
- Conducted API testing and database validation to ensure robust back-end operations, verifying data consistency and response times under various conditions. Utilized analytical skills to identify complex bugs and worked closely with developers to resolve them. Streamlined the testing process, improving defect identification and resolution rates by employing a detailed and systematic approach to testing, which enhanced the overall product quality and user satisfaction.

Social Media Misinformation Dataset Collection and Management (SMDM) Mar' 24

- Designed a scalable database using **PostgreSQL** on **AWSRDS** to track misinformation spread.
- Implemented data integrity, real-time updates, and security measures using **AWS IAM** and **CloudWatch**

SKILLS:

Languages: Java, C++, Python, C#, SQL, JavaScript, TypeScript, GraphQL, CSS, HTML5, XML, .NET, ReactJS, javascript, PHP, REST, NodeJS
Tools: Eclipse, IntelliJ, Android Studio, Anaconda, VS Code, MS Excel, Google Colab, AWS CLI, Oracle DB, Visual Studio, JDK IDE
Frameworks: Django, Scikit, NLTK, OpenCV, TensorFlow, Keras, Flask RESTful API, PyTorch, LangChain, LlamaIndex
Version Control/ CI-CD: GitHub, Jenkins, GitHub Actions, AWS CodePipeline
Methodologies: Kanban, Software Development LifeCycle, Scrum, Test Automation, Unit Testing.
Platforms: Windows, Linux, Web, MQTT, IBM Watson, AWS, Shell, Redshift, Ubuntu, Postman

PUBLICATIONS:

Rust disease classification using deep learning algorithms: Presented at Eurasia Conferences in Berlin.(May' 23)
Medify Chatbot: Based on the project that answers user queries and diagnose diseases and enables to book appointment with the specialist in the user's area. (Journal: IJARCCE) (Sept' 22)

VOLUNTEER EXPERIENCE:

Member of Rotaract Club, VIT Vellore, India: Organized many Seminars on awareness programs and also volunteered in many social-work in the near villages. (Sept'19 - Oct'21)
